NOTICE

1981, Volume 1 - n° 2.

DECEMBRE 1981.

GESAG production - Edition Jacques BONABOT. Leopold I laan, 141. BRUGGE, Belgium.

- * Vicente-Juan BALLESTER OLMO. Espana.
- * Jacques BONABOT. Belgique.
- * Michel COSTE. France.
- * Alain GAMARD. France.
- * Anders LILJGREN. Sverige.
- * Jean-Luc OVERAL. Belgique.
- * Jenny RANDLES. England.
- * Peter ROGERSON. England.
- * Jean-Pierre TROADEC. France.
- * Maurizio VERGA. Italia.

In this NOTICE we welcome the contribution of Ted Bloecher* and Keith Basterfield* two researchers from overseas who have been inform about the EWT existence by our member Maurizio Verga. Thanks Maurizio.

Don't forget EWT will be not able to become an extending "UFO group". It will stay as a team with members and correspondants on a reduce scale.

Mr Overal sent us his new adress in Belgium. Please note:

6 rue de la Brasserie
B-5700 KEUMIEE . Belgique.

o o o

Nos remerciements vont à Ted Bloecher et Keith Basterfield pour leur contribution dans la présente NOTICE * Ces chercheurs d'outremer ont été informés de l'existence du GTE via notre membre Maurizio Verga. Merci Maurice.

N'oublions toutefois pas que nous ne resterons qu'une équipe de travail, d'effectif réduit en membres et correspondants et qu'il ne rentre pas dans notre intention d'en faire un "groupement d'étude OVNI"

Monsieur Overal nous mentionne sa nouvelle adresse en Belgique. La voici:

6, rue de la Brasserie
B-5700 KEUMIEE . Belgique

* Ted Bloecher - 317 East 83rd. St. NEW YORK CITY, NY. 10028 (USA.).

* Keith Basterfield - 3 Park Lake Drive. WYNN VALE. South Australia (AUSTRALIA)

THE AUSTRALIAN ENTITY STUDY GROUP (AESG)

Keith Basterfield is looking to exchange data on global entity cases. He has compiled a 110 pages tudy on 67 Australian CE3 cases since 1868. Summaries of cases are presented and an examination and analysis performed on them. Amazingly, there have been no reported abduction cases from Australia, altho Keith is specially interested in this aspect of the phenomena. Keith would be willing to forward a copy of this CE3 Australian study (current value Aust. \$ 12.) to anyone intereted in exchanging material on CE3 events, specially abduction events. Keith is currently MUFON Continental coordinator in Australia. (see adres on front page)

* Maurice VERGA . Note 811115 (15 dec 1981)

THE AUSTRALIAN ENTITY STUDY GROUP - A STATUS REPORT

The AESG was formed in early 1977 and consist of a losely knit group of individuals within Australia who are particulary interested in "entity"-related UFO reports. The aim of the group is to investigate such reports, documents and publish summaries and more detailed case documents for distribution to researchers. Copies of these publications are forwarded to all member organisations of ACUFOS free of charge in return for their co-operation in providing input of material to us.

After formation, the first step of the group was the production of a serie of cases documents looking at some of the more well known and potentially useful entity cases, e.g. Wodonga Vic (24.8.67). Nine documents have so far been produced- these are listed at the end of this report.

Following this,efforts were made to compile an accurate record of all available entity type reports from the past, todate. A total of 105 such events have been collected, researched to some degree and indexed. These 105 events were summarised in "An Australian catalogue of close encounter type three reports" and the following eleven supplements.

In early 1980 an indepth review of 67 of these 105 events was undertaken. These being reports where entities were directly related to an object as opposed to observations of entities by themselves. I will be presenting a paper on these findings later in the conference.

Also, at about the same time, a summary of all the entity events was stored on a TANDY RADIO SHACK TRS-80 micro computer in an information retrieval system. Electronic access can be made to any case, with ease.

A new entity report form has been prepared for collection of better data in these cases. If you haven't seen a copy, these are available from the AESG. It is hoped that all investigators will utilise it.

- * A source of Australian UFO and related reports. 52 pages.
- UBIX'd. Summaries of 350 CE including nearly 100 CE3 cases (Price Aust \$ 8.).
- * An indepth review of Australian UFO related entity reports. 110 pages.
- study, diagrams, sketches, tables. UBIX'd. Price Aust. \$ 12.
- * AESG 'Case Documents'. Details of nine famous Australian entity reports. UBIX'd. Total of nine documents is 64 pages. Price Aust. \$ 7.50
- Cases presented are: Ten Mile Hill, Tas.(2.8.76); Ivy Tanks, SA.(9.73); Plymton, SA.(29.2.64); Wodonga, Vic.(24.8.67); Kimba, SA.(4.2.73); Salisbury, SA.(28.10.62); Risdon Vale, Tas.(9.11.78); Hobart, Tas.(28.11.78); Greenacre, NSW.(25.4.69).

Keith BASTERFIELD

* Based on a document presented at UFOCON 5, 1980. The Australian Entity Study Group A status report. Submitted to EWT-GTE by Maurizion VERGA (december 15, 1981)

SOME BRIEF NOTES ON HUMCAT

I developed a special interest in the humanoid cases while I was employed at NICAP in 1968 and 1969, where I first met David Webb, my colleague. We began collecting CE3 case references (I had several first-hand cases to draw upon) and eventually we had collected close to a thousand cases, from world wide sources. Our big wave of sightings in 1973 added new material and a new impetus to our work and, in 1974, we began working on a computer program that would provide ready access to the rapidly-growing case files. In 1975 we located a researcher who had access to a computer and we began entering our many case references. This first part of our work was completed in mid-1976 with the inclusion of more than 1500 case references in the computer file, which we dubbed "Hum.Cat" derived from Dr Saunders' "UFOCat", upon which it was based. Our initial entries contained just the essentials given of each case, such as a Serial Number, Date, Time, Country, State (or Province) and Town, immediate locale, number of witnesses, and Witness Name. We are able to sort by any combination of these entries, which provides a very useful index system. We had, of course, a much more complicated program to develop, but because of limited time and computer accessibility, we are so far limited to developing this rudimentary system. It takes all our time just to stay abreast of all the updates. As of now, we are more than 2200 entries in the system from world wide sources, dating from 1896 to 1979. There are probably another 200 that are still waiting to be keypunched (1980 and 1981 remain to be entered, for example, as well as many "new", older cases). We have in the past two years added two features we did not originally include in the system. The first is a rating for each case, from 0 to 5, based upon the amount of information for any case, the kind of investigation and consistency of material and who the investigator was.

- 0 Hoaxes and mistakes
- 1 Most newspaper clippings
- 2 First-hand report (if we have the case report), depending upon the thoroughness of the case material and the reputation of the investigator.
- 3 Particular well-investigated case
- 4 Will indicate a pretty iron-clad report.

The second feature introduced two years ago is the inclusion of the type of case, based upon the association of entity to the object. These range from A to G, with an "X" for hoaxes or mistakes. Their description has been already presented by Alain Gamard (see NORICE 1981, Vol 1 n° 1 pages 8-9).

- * Some brief notes on HUMCAT by Ted Bloecher (810920) submitted to EWT by Maurizio VERGA (Dec. 15; 1981)
- * About the rate 0 to 5 give by Bloecher, see also Jenny RANDLE inside NOTICE n° 1 (1981, vol 1, page 5): Comments towards a proposed common set of definitions and her propose set of levels A to E.

LEVEL E lowest level, simply an account which is third-hand (e.g.) a press cutting or an account in a book) for which no known investigation exists

LEVEL D An account of a sighting written by the witness, but which for some reason no follow up investigation has ever been possible

LEVEL C Rudimentary investigation only (i.e. the witness has filled out a report form of some kind but has never been interviewed or the case followed up)

LEVEL B Where an investigation has taken place and a report written, but not "on site". A report without investigation

LEVEL A The best investigation has been conducted, on site, and with a full report on the event and investigation has been written

CATALOGUE OF 'NEGATIVE' LANDING REPORTS IN THE IBERIAN PENINSULA

The present list gathers together all alleged type-1 UFO cases plus other apparently strange phenomena occurred at ground level, reported in Spain and Portugal since 1940, which have been explained in conventional terms. The information contained herewith is, from left to right:

Date (year,month,day), time, location, spanish province (code according to Lanibe code-file) or code 49 for Portugal, type of explanation, and researcher or source responsible for proper identification. A code for events originally not associated with the UFO phenomenon (*) is included after date when appropriate (Lone creature sightings are not included).

BALLESTER OLMO invites EWT members to made listing about negative type 1 phenomena for publication inside the NOTICES. Presentation of such work would be done as the above list concerning negative cases from the Iberian peninsula. Such national listings will be a must for some comparisons on world wide extensions

* VERGA comment - Dec. 15, 1981.

TAILLES DES ENTITES DANS LES RAPPORTS DE RR ET CRITERES ANTHROPOLOGIQUE

Alain Gamard a établi cette classification selon les critères anthropologiques relevés dans l'encyclopédie française LAROUSSE, trois volumes, édition 1966 et le QUID, édition 1980 chez Robert Laffont de Paris. Toutefois, la catégorie appartenant à une taille inférieure à 40 centimètres a été ajoutée par Gamard dans le tableau ci-dessous

minusucule (moins de 35 centimètres)	L	L
nain (de 36 à 129 centimètres)	N	N
très petit (130 à 149,9 centimètres)	A	P
petit (150 à 159,9 centimètres)	P	P
sous-moyen (160 à 163,9 centimètres)	B	M
moyen (164 à 166,9 centimètres)	M	M
sur-moyen (167 à 169,9 centimètres)	C	M
grand (170 à 179,9 centimètres)	H	H
très grand (180 à 199,9 centimètres)	D	H
géant (plus de 200 centimètres)	G	G

Derrière cette classification ont été indiqué les codes attribués dans le système de classification DATA/OVNI-HUMCAT EUROPE. Le premier groupe de code est celui octroyé à la classification anthropologique, le second groupe est le code absolu

Selon les possibilités d'estimation du ou des témoins confrontés à des entités lors d'observations proches (RR1, RR2, RR3 et RR4) l'on précisera soit un code détaillé, soit un code approximatif. Le code approximatif est donc l'absolu comme précisé ci-dessus.

* MANUEL DE CODIFICATION DATA OVNI - HUMCAT EUROPE (en préparation)
Bonabot-Gamard-Rivera. (1979).

Les membres du GTE qui souhaitent avoir une traduction précise de leurs documents en langue anglaise peuvent s'adresser à notre collaboratrice Jenny RANDLES qui les aidera dans ce sens.

The EWT members who wish to have a good translation in english language of their documents could sent them to our friend Jenny RANDLES.

A LISTING OF AUSTRALIAN TYPE 1 EVENTS

Although there have been many catalogues of type 1 events published in the past no real effort has been made to collect those from Australia.

560 interesting Australian events were collected over several years by the author. This collection included some 70 entity events (1), 70 photographic cases, 20 odd aircraft crew observations (2), 60 vehicle interference events (3) with the rest of the reports being composed of nocturnal lights, and close encounters of various kinds.

The 560 events were scrutinised for those which described more than the usual nocturnal lights and yet still fitted the Vallée classification of type 1 events, i.e. object on or near the ground, maximum of tree height. This examination reduced the 560 to just over 100.

This listing is a first step to an analysis of the type 1 events here. No analysis will be attempted yet. The purpose of this document is merely to record accurate basic details. Most reports have been taken direct from the files of Australian UFO research organisations, and very few from books or magazines. Thus this represents the best available information to date.

The next step will be the production of a catalogue of these type 1 events presenting a summary of the event and the source of information. I will be more happy to provide more in-depth information on any particular case if I can in return for your local type 1 events.
